FOR IMMEDIATE RELEASE
March 28, 2005

Needham structural engineering firm, **DM Berg Consultants, P.C.**, is currently providing structural design for the following projects consisting of renovations of “mill-type” buildings into residential space: Lawrence Mills in Lowell and Baker Square (former Baker Chocolate Factory) in Dorchester both with The Architectural Team, Inc.; Charleston Lofts (former Charleston Chew Building) in Everett with Neshamkin French Architects, Inc.; and structural consulting at Boott Cotton Mills in Lowell with The Architectural Team, Inc.

DM Berg Consultants, P.C. is also providing structural design for Pleasant Street Apartments with Steffian Bradley Architects. The project consists of a new 204-unit apartment complex in downtown Malden. The building contains three levels of parking, and due to the sloping site, each level is accessed from one of the surrounding streets. The entire 13 level building structure is composed of concrete slabs cast on long span composite deck supported by composite steel beams aligned above interior unit walls. The lateral system is composed of steel braces and moment resisting frames. The project is scheduled for completion in August 2006. The General Contractor is Payton Construction Company, Inc.
